

# ELECTRIFICATION U.S. SYMPOSIUM SERIES

## Pathways to Decarbonization in the Northeast

August 27-29, 2019  
Brooklyn, New York

Hosted by  and 

## Save the Date: Aug. 27-29, 2019

NESCAUM has teamed up with EPRI and NEEP to bring together thought leaders and experts in the transportation and buildings sectors from technology innovators, utilities, state and local governments, automakers, vendors, charging/fueling providers, and others to chart pathways for achieving rapid, cost-effective, equitable, and efficient electrification across the northeastern U.S.

The building and transportation sectors account for more than 75% of total carbon emissions in this region. Innovative technologies for achieving deep emission reductions in these two sectors are steadily coming to market, and new clean energy policies in the northeast are taking shape. Full decarbonization of these economic sectors, however, will require an integrated approach, as well as investment and policy innovation on a much larger scale than what is occurring today. The technologies, strategies, and policies that we put into play in the next decade will determine the legacy that we leave for future generations.
